

CanIt-Domain-PRO Anti-Spam Solution

THE FLEXIBLE, LOW MAINTENANCE SOLUTION TO E-MAIL SECURITY

Ads, fraud schemes, porn, viruses, phishing attempts...if it's junk e-mail, Roaring Penguin's CanIt-Domain-PRO will stop it before it reaches your mail server.

Roaring Penguin Software's CanIt-Domain-PRO provides Web Hosts, ISPs and government departments a way to manage multiple anti-spam networks.

Performance

CanIt-Domain-PRO is the most powerful enterprise anti-spam solution available - providing efficient filtering of spam and viruses at the server.

Designed for large-scale environments with multiple e-mail domains, CanIt-Domain-PRO effectively stops 98% of spam before it reaches your network, while never discarding a valid message.

Flexibility

With CanIt-Domain-PRO, you can have as much – or as little - involvement in spam/virus management as you like, giving you a 'hands-on' or 'hands-off' approach to managing junk e-mail.

Through an easy to use web-based interface, e-mail administrators can set global, per-group or per-user policies and determine the level of interaction end-users have with the system.

CanIt-Domain-PRO offers many levels of flexibility, including the ability to build whitelists, blacklists and greylists and individual or group quarantines. The choice of offering them to end-users is yours.

Ease of Use

CanIt-Domain-PRO's administrative web-based interface is simple and intuitive, providing you centralized access to all spam management tasks. CanIt-Domain-PRO also includes:

- **Realms:** CanIt-Domain-PRO enables delegation of administrative duties. The overall administrator is able to create "realms", and realm administrators will be able to create baseline rules, users and streams within their realms.
- **Setup wizards:** Use Setup wizards to simplify initial

deployment into your network

- **Automatic Updates:** updates of both the operating system and CanIt-Domain-PRO software. Use Roaring Penguin's *CanIt Automatic Updates* service to ensure you have the most up-to-date spam and virus definitions
- **Multi-Factor Spam Analysis:** Includes Bayesian filtering. Use Bayesian filtering to automatically adapt to changes in the spammers' tactics.
- **Anti-virus protection**

Hardware Options

CanIt-Domain-PRO is available as a software download, a soft appliance that is installable on a wide variety of Unix and Linux, or as a pre-configured plug-and-play appliance on a wide variety of x86 hardware.

Cost Effectiveness

CanIt-Domain-PRO provides efficient filtering at a price designed for the enterprise customer. For current pricing, please contact Roaring Penguin directly at sales@roaringpenguin.com.

CanIt-Domain-PRO Anti-Spam Solution

THE FLEXIBLE, LOW MAINTENANCE SOLUTION TO E-MAIL SECURITY

CanIt-Domain-PRO Key Technical Features

Feature	Details
Realms	CanIt-Domain-PRO enables delegation of administrative duties. The overall administrator is able to create "realms", and realm administrators will be able to create baseline rules, users and streams within their realms.
CanIt-Domain-PRO Appliance	Plug-and-play rack-mounted e-mail gateway server suitable for all mail environments.
Simple and Expert Interfaces	IT staff can set up preconfigured filtering streams from which users or groups of users can select their preferences.
Spam detection	Variety of techniques including keyword search, header analysis, message format analysis, Bayesian statistical analysis, blacklists, whitelists, greylists, open proxy lists, DNS verification, SpamAssassin™ content-filtering rules, sender policy framework (SPF), custom rules and more.
Hit-and-run detection	Temp-fails e-mail sent from new senders to cause legitimate servers to retry the message.
Theme-able interface	Customize CanIt to look like your own web interface.
Per-user Bayesian Filtering	Automatically train CanIt to recognize spam without the need for new filters - available on a per-user, per-group or enterprise-wide basis.
CanIt Automatic Updates Service	Ensures you have the most up-to-date spam and virus definitions.
Spam threshold setting	Spam threshold setting is customizable.
Response options	Tag, quarantine, return or block spam – it's your choice. CanIt can also be set to block certain attachments.
Fast and scalable architecture	Efficient architecture minimizes the processing requirement for e-mail content scanning in any size environment.
Anti-virus & other support	Includes Clam Anti-Virus, and interfaces are available for simple integration with more than ten leading anti-virus solutions. Supports policy compliance filtering, adult content filtering, e-mail management, encryption and more.
Internal and outgoing mail filtering	CanIt-Domain-PRO can be configured to filter internal and outgoing e-mail.
Scriptable	Completely customizable in Perl; full source code included.
