

Affordable, Effective Anti-Spam Solution for ISPs

Roaring Penguin Software provides effective, affordable anti-spam solutions to ISPs, campuses and enterprises. ISPs benefit from our CanIt-PRO product, a robust and highly efficient anti-spam and anti-virus solution that eliminates the support burden of spam with a powerful cocktail of spam-fighting techniques.

CanIt-PRO allows ISPs to customize the solution on their servers, then push it out to individual end-users to manage their own spam via a simple web interface.

CanIt-PRO ISP Installation

Look Who's Using CanIt-PRO:

ISPs:

- Dixie-Net
- Digicon Communications
- Red River Internet
- NPG Cable
- Armstrong
- KPNQwest
- Software Workshop
- Netsource
- ... and many more!

Flexible, Web-Based End-User Controls

By separating e-mail into private, isolated streams, CanIt-PRO enables ISPs to give individual end-users control over mail filtering and preferences. ISPs customize the end-user interface to suit their service offerings and then let end-users control the day-to-day management of spam. Using a simple web interface that the ISP can customize as required, end-users can opt out, tag spam or exercise greater control over white lists, blacklists and more.

Efficient and Scalable Architecture

CanIt-PRO is an accurate and efficient mail filter, stopping 98% of spam at the mail server without losing a valid message. Because CanIt-PRO is flexible and programmable, ISPs can easily customize the system for further efficiencies and theme the end-user interface to match corporate look and feel. The CanIt-PRO architecture is highly scalable, and is proven in installations of 120,000+ users. The underlying technology, MIMEDefang, is currently deployed in e-mail environments serving up to 230,000 mailboxes.

Anti-Virus Options

Viruses can bring down the ISP business, and CanIt-PRO helps reduce the risk and overall impact of e-mail borne viruses. CanIt-PRO's underlying technology, Roaring Penguin's MIMEDefang mail filtering software, is used by ISPs worldwide to stop malicious e-mail attachments at the server. Likewise, CanIt-PRO effectively stops certain mail attachments – as specified by you – from ever reaching your mail servers. >>>

Anti-Spam Solution for ISPs

Comparison to Outsourced Services

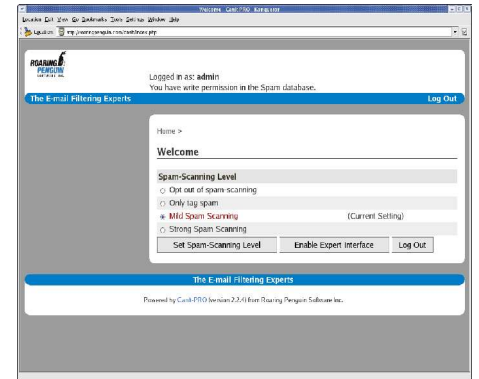

Some anti-spam solutions work by relaying your e-mail through their servers, where the spam management is performed. CanIt-PRO offers these benefits over outsourced solutions:

- **Lower Cost** - Because you own the CanIt-PRO solution, you do not pay recurring monthly fees as with a hosted solution.
- **Outbound Filtering** - CanIt-PRO can filter both incoming and outgoing e-mail at no extra charge, allowing you to monitor outbound mail traffic.
- **Security** - You can run end-to-end SMTP encryption because CanIt-PRO resides on your mail server.
- **Privacy** - With CanIt-PRO, your sensitive e-mail is not inspected by third-party servers.
- **Flexibility** - You can customize CanIt-PRO in ways that are impossible with outsourced solutions.
- **Reliability** - You are not dependent on third-party servers.
- **Efficient** - With CanIt-PRO, there is no delay in your mail service.

Powerful Cocktail of Spam-Fighting Techniques

CanIt-PRO is the most powerful server-side anti-spam solution available to ISPs and web hosts. It provides complete control of the e-mail environment and one-stop administrative convenience for all spam management activities.

CanIt-PRO Highlights	Details
CanIt Automatic Updates Service	Ensures you have the most up-to-date spam and virus definitions.
Spam Detection	Variety of techniques including keyword search, header analysis, message format analysis, per-user Bayesian statistical analysis, blacklists, whitelists, greylists, open proxy lists, DNS verification, SpamAssassin™ content-filtering rules, sender policy framework (SPF) and more.
Outbound Filtering	Optional outbound scanning feature filters outgoing messages at no extra charge.
Simple and Expert Interfaces	Filtering streams from which users or groups of users can select their preferences.
Per-User Bayesian analysis	Heuristic analysis based on training CanIt-PRO to recognize spam/non-spam.

CanIt-PRO End-User 'Select Filtering Level' Interface

Affordable

CanIt-PRO is cost-effective because it can be purchased outright without recurring monthly fees. In addition, all of CanIt-PRO's technical prerequisites are freely available. CanIt-PRO's inherent efficiency also means that you'll likely need less hardware to run the solution in comparison to alternatives.

Roaring Penguin Software offers special discounts to ISPs and web hosts, as well as a special competitive upgrade offer.
