Improving Office 365 E-Mail Filtering

Augmenting Office 365's e-mail filtering with Roaring Penguin Software.

Office 365 Benefits from Hosted CanIt protection

Roaring Penguin adds advanced spam filtering and e-mail security features in front of Office 365, letting you make the most of your Office 365 investment and increase your security.

Features for MSPs

Hosted CanIt was built with resellers and MSPs in mind. The multi-tenant architecture lets an MSP manage clients and delegate per-client administrative responsibility. And the brandable web interface keeps the MSP brand front and center in front of its clients.

E-Mail Continuity

Office 365 is a robust and reliable system, but does suffer outages from time to time. Roaring Penguin provides 30-day business continuity in the base package. You can read and reply to mail from within our Web interface, even during Office 365 outages. Naturally the Roaring Penguin infrastructure is completely separate from Microsoft's Office 365 infrastructure and thus is not affected by Office 365 downtime.

Advantages of Hosted CanIt Protection

Providing effective spam filtering to end-user clients is the most important factor in an MSP's spam filter selection process. Although Office 365 includes some mail filtering, Roaring Penguin provides far more flexibility in spam classification and custom rules and policies. Additionally, our technical support team are available and responsive to customer issues and requests. Roaring Penguin can also provide services including outbound filtering, e-mail encryption, and e-mail archiving to clients who require them. This capability is especially important for MSPs who must provide service to multiple clients with differing requirements.

Microsoft Azure Integration

Hosted CanIt integrates with Microsoft Azure, simplifying management of the e-mail filter when deployed in front of Office 365. And Hosted CanIt can make use of IMAP or POP3 authentication, eliminating the need to maintain a duplicate user database.
